Sequence 4886, Application US/09328352
Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: BADMANNI FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2,

Sequence 24, Application US/09346510B

Sequence No. 6231014

GENERAL INFORMATION:

SEQUENCE NO. 6231019

TITLE OF INVENTION:

SH3-Containing Protein, DNA and Uses Thereof

TITLE OF INVENTION:

CURRENT APPLICATION NUMBER: US/09/346,510B

CURRENT FILING DATE: 1999-07-01

PRIOR APPLICATION NUMBER: 08/871,732

PRIOR APPLICATION NUMBER: 08/871,732

PRIOR FILING DATE: 1997-06-09

NUMBER OF SEQ ID NOS: 32

from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney murine leukemia vitus reverse transcriptase (MMLV-RN) and S-methyl dCTP. The second strand was synthesized with DNA polymerase and Khase H. Complementary DNA was blunt ended with PFU DNA polymerase, ligated with BcoR I adapters in the presence of ligase and digested with Xho I. The CDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNAs greater than 400bp and 1000 bp., respectively. The CDNA was then directionally ligated to the Uni-ZAP KR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on Xil Blue WRF cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exhasist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA krom the phages. Upon plating of the components of the cDNA clones were generated with the the form 200 ul of saturated culture with the the stength BigDye terminator sequencing reactions were performed on MJ Tetrad thermal cyclers (WJ Research, Waltham, MA), and analyzed on 3700 automated application as follows: 72% of genes have I copy; 14:3% 2:12% 3:10; 14% 11-50 and oil% 5:12% 3:10; 14% 11-50 and oil% 5:12% and 23% and 23% are unidentified.

Sa RP7 C 148 g 144 t C DNA clone were selection; 45% of genes are present in GenBank and have susigned function; 45% of genes are present in GenBank and analyse on 3700 auchariacians and present in GenBank and analyse on 3700 auchariacians and 271% of genes are pre

// Glone="lb="mouse organ of Corti CDNA pBluescript; The Corti CDN was fine dissected from a total of 386 oc as follows: 102 samples from post-natal (p) day S; 72 from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P1; 14 from P1 and 24 from P13. After killing animals by cervical dislocation followed by decapitation, the bulla was removed and opened in Leibowitz medium. The bony capsule of the cochlea was chipped away, stria vascularis and spiral ligament were removed and the sensory epithelium was carefully dissected out of the modiolus. Total RNA was extracted using the micro Fasttrack kit (catalog # K193-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Unizap XR vector kit (catalog # 23721), strategene) and Unizap XR vector kit (catalog # 23721), strategene) and Unizap XR digapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(d7) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney murine lunker brimer everse transcribed using whom we was a prime of the second strand was carefully dCTP. The second strand was carefully dCTP. The second strand was carefully dCTP. The second strand was carefully dCTP. The second strand was carefully dCTP. The second strand was carefully dCTP. columns to enrich for cDNAs greater than 400bp and 1000 bp
, respectively. The cDNA was then directionally ligated to
the Dni-ZAP XR vector, which had been predigested with
ECOR I and Xho I. The phagemid was packaged with Gigapak
III Gold and, upon titration on XLI Blue MRF' cells, the
yield of the phage library was estimated to be 11,100,000
recombinants. Stratagene's ExAssist Interference
resistance helper phage (catalogue # 211203) was adopted
to rescued library, individual cDNA clones were selected and
grown in 96-well, and growth plate. Plasmid DNA was
purified from 200 ul of saturated culture with the
concerts (TM) plasmid purification kit (Invirogen,
Carlebad, CA) as instructed by the manufacturer. ESTs from
the 5' end of the cDNA clones were generated with the
universal MRI zeverse primer (CAGGAAACAGCTRAGAC) and 25$
strength BigDye terminator sequencing chemistry (Applied
Biosystems, Foster City, CA). Sequencing reactions were
performed on MJ Tetrad thermal cyclers (MJ Research,
Waltham, MA), and analyzed on 3700 automated capillary
sequencers using POPS polymer (Applied Biosystems, Poster
City, CA). The frequency distribution of the library is
as follows: 72% of genes have I copy: 14.3% 2; 12% 3-10;
1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of
genes are present in GenBank and have know function;
12% are uncharacterized ESTS and 20% are unidentified."

Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96 (TM) plasmid purification kit (Invitrogen,

Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the universal M13 reverse primer (GAGGAAACAGCTATGACC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capilary sequencers using POS5 polymer (Applied Biosystems, POSter City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have bits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        313 CCCAGCAACTTGGTGAAGGAGCAGCGTGTATACCAGGAGGCCACCAAGGAGATCCCAACC 372

reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker-primer and transcripted using Moloney murine leukemia virus reverse transcripted using Moloney murine leukemia virus reverse transcripted using Moloney murine leukemia virus reverse transcripted using Moloney murine leukemia virus reverse transcripted using by moloney murine leukemia virus reverse transcripted using synthesized with DNA polymerase, and digested with DNA was blunt ended with Ptu DNA Molymerase, ligated with EcoR I adapters in the presence of ligase and digested virus to enrich for cDNAs greater than 400pp and 100 bp. respectively. The cDNA was stend directionally ligated to the UnizAbx Kn vector, which had been predigested with Gigapak III Gold and, upon titration on XII Blue MRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exhasist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the result of trom 200 ul of satulogue # 211203) was adopted to rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of satulogue # 211203 was adopted to rescue plasmid purification kit (Invitrogen, Carlabad, CA) as instructed by the manufacturer. ESTS from the 5' end of the cDNA clones were generated with the universal MI3 reverse primer (CAGGAAACAGCTATCACC) and 25\* strength BigDye terminator sequencing reactions were performed on MI Tetrad thermal cyclers (MJ Research, Wallham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA).

The frequency distribution of the library is as follows: 72\* of genes have Icopy, 14.3\* 2; 12\* 3-10; 1.4\* 11-50 and 0.1\* 51-150. As to gene function, 45\* of genes are present in GenBank and have know this individual double are uncharacterized & STS and cold the cold of the cold of the cold o

Total RNA was extracted using the micro Fastrack kit (catalog # K1593-02; Invitrogen, Carlsbad, CA), according to manufacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap KR vector kit (catalog # 237211, Stratagene) and Uni-Zap KR Gigapack III Gold Cloning kit (catalog # 23721), both from Stratagene (La Jolla, CA, USA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney murine leukemia virus reverse transcribed using virus reverse transcriptase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /sex=mare must remard day 5 to 13"
/clone_lib="Mouse Organ of Corti cDNA pBluescript"
/clone_lib="Mouse Organ of Corti; vector: pBluescript; The
/note="Organ of Corti; vector: pBluescript; The
organ of Corti (CC) was fine dissected from a total of 386
OC as follows: 102 samples from post-natal (P) day 5; 72
from P6; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bony
capsule of the cochlea was chipped away, stria vascularis
and spiral ligament ware removed and the sensory
epithelium was carefully dissected out of the modiolus.

The second strand was synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Pku DNA polymerase, ligated with ECOR I adapters in the presence of ligase and digested with Xho I. The CDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNAs greater than 400bp and 1000 bp, respectively. The CDNA was then directionally ligated to

```
the Uni-ZAP XR vector, which had been predigested with ECOR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XLI Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exhasist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96(TM) plasmid purification kit (Invitrogen, Carlabad, CA) as instructed by the manufacturer. ESTS from the 5' end of the CDNA clones were generated with the universal MI3 reverse primer (CAGGAAACAGCTAATGACC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA).

The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 110, 1.4% 11-50 and 0.1% 51-160. As to gene function, 45% of genes are present in Genbank and have know function; 13% have winch aracterized ESTs and 20% are unidentified."

//clone_lib="Mouse Organ of Corti cDNA pBluescript"
//clone_lib="Mouse Organ of Corti, Vector: pBluescript; The
organ of Corti (OC) was fine dissected from a total of 386
OC as follows: 102 samples from post-natal (P) day 5; 72
from P0; 60 from P7; 46 from P8; 18 from P9; 20 from P10;
14 from P12 and 24 from P13. After Killing animals by
cervical dislocation followed by decapitation, the bulla
was removed and opened in Leibowitz medium. The bouy
capsule of the cochlea was chipped away, stria vasularis
and spiral ligament were removed and the sensory
epithelium was carefully dissected out of the modiolus.
Total RNA was actracted using the mairor Fastrack Kit
(catalog # K1591-02; Invitrogen, Carlsbad, CA), according
to manufacturer's instructions. Reverse transcription and
library construction were carried out with the Uni-Zap XR
vector Kit (catalog # 237211, Stratagene) and Uni-Zap XR
vector Kit (catalog # 237211, Stratagene) and Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
vector kit (catalog # 137211, Stratagene) and Uni-Zap XR
vector kit (catalog # 237211, Stratagene) and Uni-Zap XR
vector with the linker- primer and transcripted using
Noloney murina an Xb I site. First strand synthesis was
primed with the linker- primer and transcripted
Noloney murina leukemia virus reverse transcriptes
(MMLV-RT) and 5-methyl dCTP. The second strand was
synthesized with DNA polymerase and RNase H. Complementary
DNA was blunt ended with Pfu DNA polymerase, ligated with
EcoR I adapters in the presence of ligase and digested
vith Xho I. The CDNA was then directionally ligated the
Cook I adapter Contaction on XLI Blue MRF' cells, the
Vield of the phage library was estimated to be 11,100, or
respectively. The CDNA was then direction be 11,100, or
respectively. Strat

Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 md growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concerted (TM) plasmid purification kit [Initingen, the Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the

universal M13 reverse primer (CAGGAAACAGCTATGACC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POP5 polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3.10; 1.4% 11.50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                490 bp mRNA linear EST 19-JUN-2002 gi37b12.y1 Mouse Organ of Corti cDNA pBluescript Mus musculus cDNA EQ565411.

manufacturer's instructions. Briefly: 1.5 ug mENA was reverse transcribed using a hybrid oligo(d7) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker primer and transcribed using primed with the linker primer and transcribed using primed with the linker. Primer and transcribed using moloney murine leukemid virus reverse transcriptase (MMLV-RT) and 5-methyl dCTP. The second strand was synthesized with DNA was blund made with PIU DNA was blund made with PIU adapters in the presence of ligase and digested with Xho I. The CDNA was sequentially size fractionated over pharmacia Size Sept00 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNA greater than 400bp and 1000 bp. respectively. The CDNA was then directionally ligated to the Dni-ZAP XR vector, which had been predigested with BcoR I and Xho I. The phagemid was packaged with Gigapax III Gold and, upon titration on Xil Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exassist Interference resistence helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the resistance helper phage (catalogue # 211203) was adopted rescued library, individual cDNA clones were selected and grown in 66-well. 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated outlure with the concerts of TM) plasmid purification kit (Invitrogen, Carlebad, CA) as instructed by the manufacturer. ESTs from the 5' end of the cDNA clones were generated with the bestormed on MJ retrad thermal cyclers (WA Research, Waltham, MA), and analyzed on 3700 automated capillary sequences using POP5 polymer (Applied Biosystems, Foeter City, CA).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  121 ATTICTCTGGCAAGAGCACAGGAAGATTACAATGCCCCAGACTGTAGGTTCATCGATGTC 180
                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAPS9063 to AAPS9089 and AABS9122 to AABS9122 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      131 ATTICTCTGGCAAGAGCACAGGAAGATTACAATGCCCCAGACTGTAGGTTCATCGATGTC 190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promocrers and inhibitors for preventing or treating bone and joint diseases as well as pathologic anglogenesis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antinfinametory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of prometers and inhibitors for preventing or treating bone and joint diseases as well as pathologic anglogenesis.

The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell

The invention relates to an isolated novel secreted polypeptide (I) and polynucleotide (II). (I) and (II) are useful for treating cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, neurological and send polyneating disorders. Infertility neurological and disorders, and diseases, cardiovascular diseases, respiratory diseases, cardiovascular diseases, respiratory diseases, cardiovascular diseases, respiratory diseases, cardiovascular diseases, respiratory diseases, cardiovascular diseases, respiratory diseases, cardiovascular diseases, respiratory diseases, cardiovascular diseases, respiratory diseases, cardiovascular diseases, and cardiocase for induction and/or metabolism of the genes, as vaccines for inducing immunological response in a mammal, and in cardior many and polypeptide in cells. The polypeptides can be used as immunogens to produce antibodies immunospecific for the polypeptides, and be used as diagnostic reagents, in chromosome localisation studies, and in tissue expression studies. The present sequence represents the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of Hyseq clone identification number 16372272, which was obtained from a human thymus CDNA library using standard PCR with primers specific for vector sequences clanking the inserts, sequencing by hybridisation sequences signature analysis, and Sanger sequencing techniques. This expressed sequence tag was used in the assembly of a full-length cDNA sequence (see AAH2643) encoding a novel human growth contactor-like polypeptide (GRLP, see AAB82671). The GRLP belongs to the same protein family as growth regulatory proteins growth factors, human melanoma derived growth regulatory protein prouts of 64% similarity and 45% identity over 111 amino acids) comelanoma inhibitory activity, cattle cartilage-derived criminarity over 126 amino acids) and other retinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid sensitive proteins. GRLP polypeptides and polynucleotides of the invention and diagnosis of disorders and diseases caused by, or involving, and diagnosis of disorders and diseases caused by, or involving, cartified the acid the acid the analysis and maintenance, inhibition of mile meaning and polynucleotides and diagnosis of disorders and diseases caused by, or involving, cartified the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid the acid t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and primers, for chromosome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  peptide-nucleic acid molecules, and to produce transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Growth regulatory-like polypeptide; human; cartilage; melanoma; neuroectodermal tumour; glioma; cancer; gene therapy; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              growth and tumours, including neuroectodermal tumours such as gliomas. The polynucleotides can also be used to design probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Boyle BJ, Ford JE, Arterburn MC, Tang YT, Liu C;

The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, theumatoid arthritis, angina, myocardial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ferrara N, Gerber H, Gerritsen ME, Goddard A; PJ, Gurney AL, Hillan KJ, Marsters SA, Pan J, Paoni NF; PF, Watanabe CK, Williams PM, Wood WI, Ye W;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or angiogenic disorders in a mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              healing. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 521 BP; 167 A; 86 C; 131 G; 137 T; 0 other;

                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to
ABB85003. The PRO proteins and polymucleotides have cardiant, cytostatic,
antiangiogenic, bypotensive, vulnerary and antiarteriosclerctic
activities, and can be used in gane therapy. The PRO polymucleotides,
proteins, agonists and antagonists are useful for treating or diagnosing
a cardiovascular, endothelial or angiogenic disorder in a mammal,
e.g. cardiac hypertrophy, trauma, cancer, age-related macular
degeneration, atherosclerosis, hypertension, arterial restenosis,
cheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis,
lymphangitis, tunnour angiogenesis (such as breast carcinoma and liver
carcinoma) and wound healing. The PRO polynucleotides have applications
in molecular biology, including use as hybridisation probes, and in
chromosome and gene mapping. Abl88259 to ABL88267 represent primers and
probes used in the exemplification of the present invention.

                      The invention relates to one hundred and twenty two nucleic acids cocding PRO polypeptides. The sequences of the 122 PRO polynucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, and antagonists are useful for treating a PRO related disorder. The PRO polypeptides are useful for treating a PRO related disorder. The PRO polypeptides are useful for diagnosing tumours, especially lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour. The PRO polypeptides are useful for stimulating the proliferation of or gene expression, in paricyte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating continuating the release of tumour necrosis factor-alpha from human blood, stimulating or inhibiting the proliferation of normal human dermal fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABK33556-ABK33657 represent human processes the invention.
